Grain sorghum – Technical fact sheet

A90

NEW

Appealing hybrid with performance to match.

- Solid early seedling vigour, with exceptional below ground root activity setting the plant up for the season
- Very good tolerance to drought lodging in the toughest environments
- Large grain size and dependable production supported by an official midge resistance score of 5
- Medium – long flowering maximises available moisture and nutrition before filling the grain and drying down quickly for harvest

A90 is a great new addition to the A series sorghum lineup as a companion to A50 as a maturity split or to support A88 and A14 with a different plant type and characteristics.
