

# Canola – Technical fact sheet

Optimum GLY® Hybrid

## PY323G

### A new era of innovation, performance and weed control for the early maturity canola segment.

This Y Series® hybrid, in its early maturity segment, presents a groundbreaking blend of top-tier genetics.

It combines Pioneer's renowned Y Series® genetics with cutting-edge weed management solutions to provide exceptional performance and agronomics.

By integrating these innovations, it promises to enhance the profitability of your crop rotations.

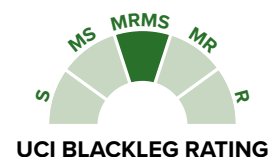

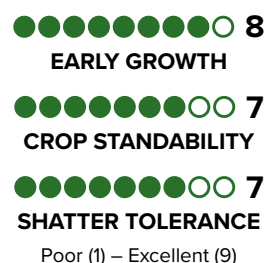

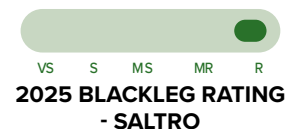

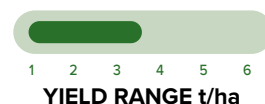

### Agronomic positioning

- Shorter season environments
- Later sowing in MRF regions

### Key features

- Vigorous early growth
- Early maturity
- Very high yielding
- Exceptionally high oil

### Trait ratings

Pioneer® brand seeds are produced and distributed in Australia by **GenTech Seeds**, a **Yates Family Business**
