Corn – Technical fact sheet

P92575

Solid, balanced hybrid, with top-of-the-line foliar health.

Plant where Northern Leaf Blight, standability and drought tolerance are seasonal concerns.

- Competitive silage yields compared to P9127, which it replaces
- Moderately tall with strong agronomics, superior root and stalk strength
- Combines excellent drought tolerance, staygreen, Northern Leaf Blight and Rust resistances to deliver high and stable silage yields
- Late season staygreen and plant health delivers a wide harvest window and silage with exceptional digestibility and energy

First choice in southern Victoria where plant health and yield are a priority.
