Summer forage – Technical fact sheet

Graze N Sile

Sorghum x Sorghum hybrid

The best choice for pit silage production.

- A water efficient option providing the most comparable feed option to maize silage
- High white grain component delivers proven top quality (ME) silage for meat or milk production
- Good leaf disease resistance for better silage quality and yield
- Regrows after cutting meaning it is able to be cut a second time or grazed
- Higher Fall Army Worm (FAW) tolerance than corn in high pressure situations and easier to control FAW with Graze N Sile's open head

Graze N Sile is a tall, grain-bearing forage sorghum hybrid. These unique attributes mean Graze N Sile produces high quantities of silage with high energy content. Graze N Sile is the ideal substitute for maize silage in dryland areas or in limited irrigation situations where highest quality silage is the goal.
