# Grain sorghum – Technical fact sheet

## A14

### Steadfast hybrid for reliable performance every season.

- Outstanding height uniformity, making harvest management a breeze
- Stable dry down after desiccation
- Exceptional grain size with low screenings and an appealing grain colour
- Strong midge resistance rating, protecting grain through high pressure situations

A14 has a proven track record of delivering consistent yields. A14 is an excellent option for the main season planting window in good dryland and irrigated systems, substitute to A88 if cool planting conditions are present early.
