## Inoculant – Technical fact sheet

### Multi-crop silage inoculant

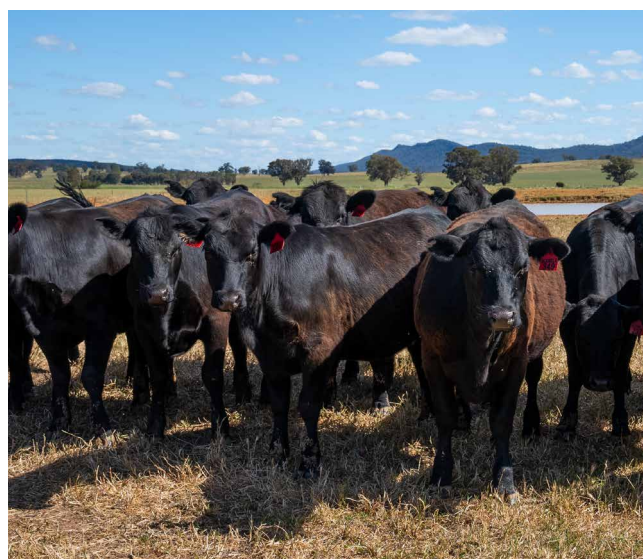

# 1174

**Pioneer® brand 1174 is a multi-crop inoculant designed for all crops including summer forage and maize.**

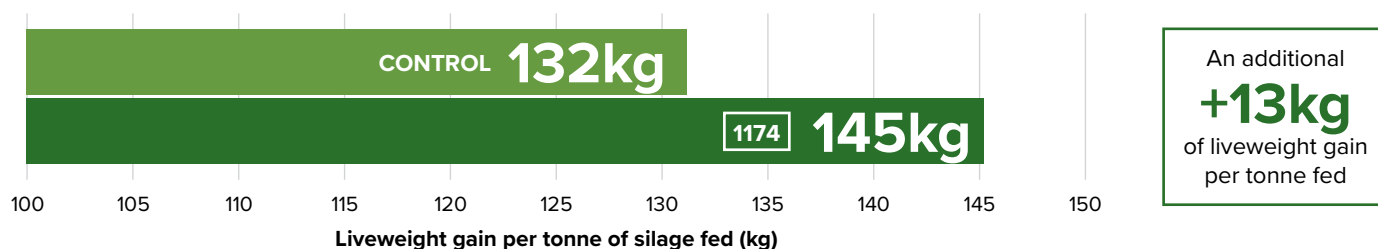

- 1174 contains live lactic acid-producing bacteria that have been specifically selected to assist in the production of high quality silage.
- Patented strains of *Lactobacillus plantarum* and *Enterococcus faecium* have been proven to promote faster fermentation while increasing dry matter recovery.

#### Pioneer® 1174

- Improves fermentation
- Increases dry matter recovery & animal performance
- Low cost inoculant solution

#### Australian beef feeding trial

Australian beef feeding trial conducted at NSW Agriculture's Research Centre at Wagga Wagga. An extra 13kg of beef per tonne of maize silage fed when treated with 1174 compared to untreated (Kaiser and Piltz, 1998).

**Pioneer® brand seeds** are produced and distributed in Australia by **GenTech Seeds**, a **Yates Family Business**
