P2307

Pioneer® brand Maize performance information

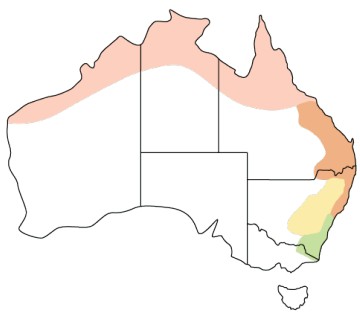

Silage and coastal grain specialist.

Be prepared to be impressed by the resilience of this hybrid.

- Robust tropical genetics provides exceptional late season plant health.
- Very tall plant with impressive Northern Leaf Blight tolerance to protect yield in high pressure situations.
- With its hard-textured, flinty grain, ensure kernels are well processed and the crop is ensiled for at least four months prior to feeding out to maximise starch availability.

P2307 is an excellent silage option for growers in coastal and northern regions with high Northern Leaf Blight pressure who require reliable silage production.
