Recommended for you

## The best choice for pit silage production

Graze-N-Sile is a tall, grain-bearing forage sorghum hybrid. These unique attributes mean Graze-N-Sile produces high quantities of silage with high energy content. Graze-N-Sile is the ideal substitute for corn silage in dryland areas or in limited irrigation situation.

### Key Features

- Sorghum x sorghum hybrid
- Ideal for pit silage
- More water efficient than corn
- Grain yields similar to grain sorghum hybrids (do not direct harvest like grain sorghum)
- White grain type

### Early seedling vigour 5

### Beef grazing 5

### Dairy grazing 4

### Sheep grazing 4

### Hay making 5

### Fast feed 4

### Late Summer/carry over feed 5

### Pit silage 9

### Round bale silage 6

**RATING: 1 = poor 9 = excellent**

## Quality pit forage sorghum silage begins with the right Pioneer hybrid seed and grass/cereal inoculant

### 11G22 WITH RAPID REACT™ AEROBIC STABILITY

#### Dual Purpose Inoculant

##### Grass / Cereal Silage Specific

- Grass / Cereal specific
- Improves fermentation
- Increases dry matter recovery & animal performance
- Reduces heating (aerobic spoilage)
- Feed out one day in advance
- Maximize return on silage
- Easily manage large pitface
- Feed out in 7 days

### 1174

#### Designed for all forages

##### Multi-Crop

- Multi-crop use
- Improves fermentation
- Increases dry matter recovery & animal performance
- Low cost inoculant solution

## QLD planting information

	SSS	BETTA GRAZE	MEGA SWEET	GRAZE-N-SILE
<b>Comments</b>	Super sweet and fine stems, multiple grazings	Early seedling vigour	Grain-bearing: feed value increases with maturity	For pit silage
<b>Planting rate</b>	<b>Marginal dryland:</b> 2-5 kg/ha <b>Good dryland:</b> 6-12 kg/ha <b>Irrigated/coastal:</b> 12-16 kg/ha	<b>Marginal dryland:</b> 2-5 kg/ha <b>Good dryland:</b> 5-10 kg/ha <b>Irrigated/coastal:</b> 10-30 kg/ha	<b>Marginal dryland:</b> 2-4 kg/ha <b>Good dryland:</b> 5-6 kg/ha <b>Irrigated/coastal:</b> 8-12 kg/ha	<b>Marginal dryland:</b> 40-60,000 seeds/ha <b>Good dryland:</b> 75-100,000 seeds/ha <b>Irrigated/coastal:</b> 100-150,000 seeds/ha
<b>Row spacings</b>	<b>Marginal dryland:</b> Up to 150 cm <b>Good dryland:</b> 10 cm to 50 cm <b>Irrigated/coastal:</b> 10 cm to 50 cm	<b>Marginal dryland:</b> Up to 150 cm <b>Good dryland:</b> 10 cm to 50 cm <b>Irrigated/coastal:</b> 10 cm to 50 cm	<b>Marginal dryland:</b> Up to 150 cm <b>Good dryland:</b> 10 cm to 100 cm <b>Irrigated/coastal:</b> 10 cm to 50 cm	<b>Marginal dryland:</b> Up to 150 cm <b>Good dryland:</b> 10 cm to 100 cm <b>Irrigated/coastal:</b> 10 cm to 50 cm
<b>Hybrid management</b>	SSS is a sudan hybrid, which means it has a lower potential for prussic acid production. Prussic acid can be heavily influenced by grower management.	Strict management is required to realise full genetic potential and quality. Graze early and often.	Most flexible. Maintains maximum quality and is attractive to stock at any growth stage either early, mid or late season, as well as going into Winter.	Precise management required for silage production in areas where corn is not an option. Similar management to growing grain sorghum.
<b>Grazing tips</b>	Highly palatable at all stages of maturity and growth. Suitable for dairy, sheep and cattle.	High sugars, fine stems and higher digestibility allows for greater intake and better crop area utilisation - commitment to graze early and often (at 1-1.5m in plant height).	Good quality at any stage of growth, with feed value increasing with maturity. Ideal for grazing at any growth stage, especially late. Mega Sweet will set grain.	If direct grazing ensure plants are 1m and 1.5m in height. If direct grazing there is an increased risk of acidosis once the grain fill period reaches 50% dough. Silage is the best option once this maturity is reached.

# What you seed is what you get

**Seed Applied Technologies (SAT) protect growers' investment in seed**

As requirements for fungicides, insecticides and additives change over time, Pioneer Seeds selects the best available chemical technologies for our hybrids each year, and supports Australian growers to access these chemical technologies through safely and professionally applying them to our commercial hybrid seeds and marketing them under the Betta Strike® and Betta Strike® Plus brands.

Pioneer Seeds is not singularly focused on developing or supporting any individual fungicide or insecticide. We concentrate on the genetic capabilities of our seed products and collaborate with specialist crop science companies to develop combinations of insecticide, fungicide, additives and polymers that we believe will best provide efficacy, seed safety, and maximum combined product potential.

Pioneer Seeds test these combinations in our own research program for at least two years before making our SAT offerings available to the market to ensure that the maximum genetic potential of our seed products can be achieved on farm.

Insect and disease pressures facing the different species of broadacre seeds we produce and distribute differ, and we offer varied formulations under these brands from species to species, additionally to year to year.

Responsible stewardship practices help maintain seed treatment integrity, which keeps the active ingredient on the seed to achieve the maximum crop health benefit for the investment. In addition, these practices help minimise the potential for adverse effects on producers and the environment, including pollinators, which may be present at the time of planting.

For further information on selecting SAT in your cropping program, ask your Pioneer Territory Sales Manager or Farm Services Consultant for a FarmCheck™.
